

Emergency Operations & Capacity Overview

• Demand Pressure • Capacity Utilization • Service Performance

Overview

Patient Journey

Clinical Outcomes

Total Visits

10K

Patient demand increased by 6.5%

Avg Wait Time

61 min

Average wait times remained stable

Avg Bed Occupancy

54%

Available capacity remains within target range

Mortality Rate

3.32%

332 deaths • 9,994 Visits

Patient Satisfaction %

62.50%

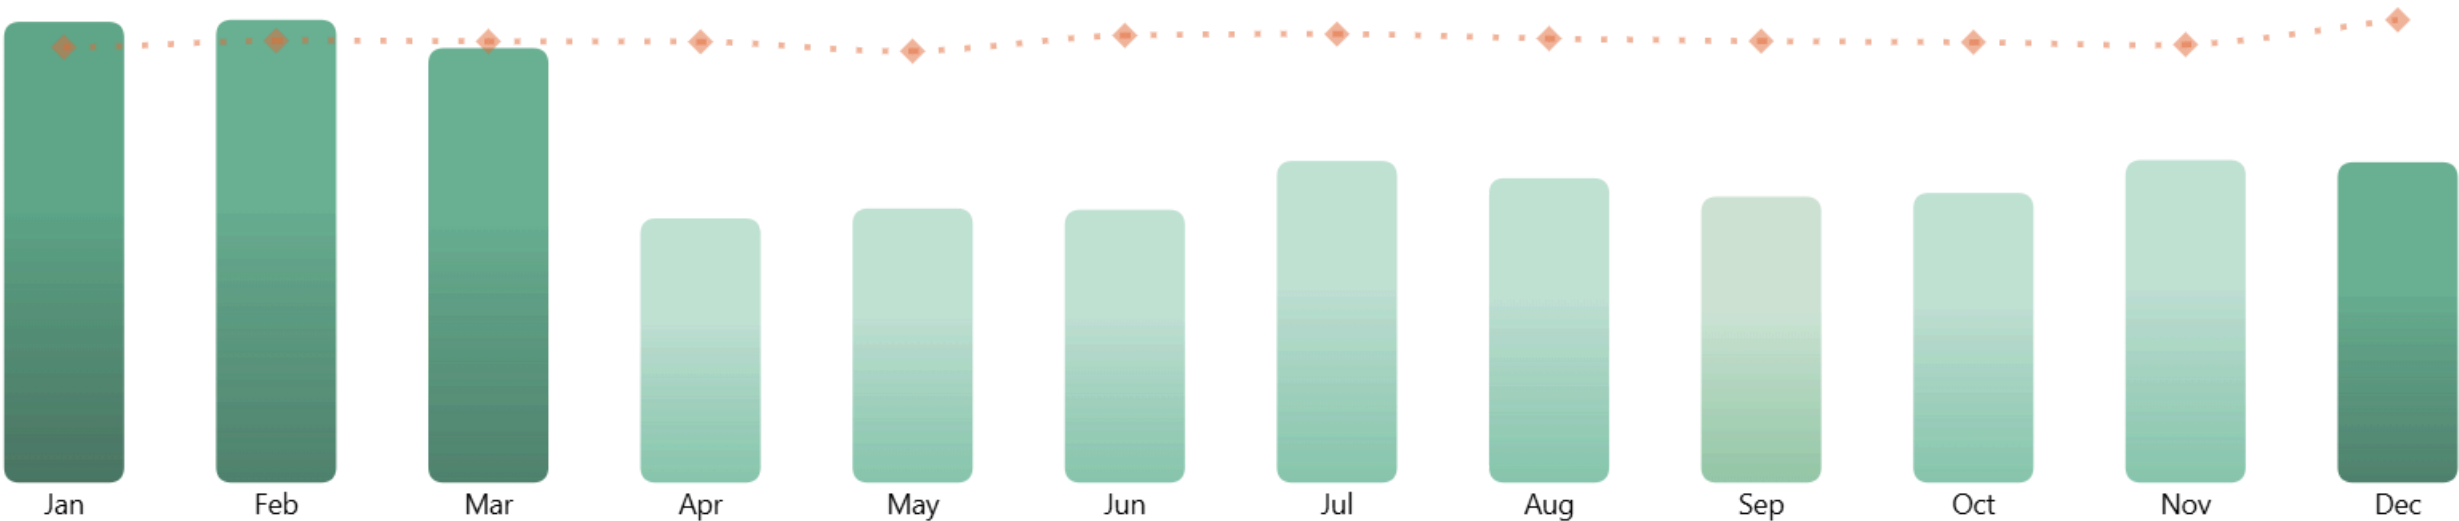

Patient satisfaction remains moderately positive

Emergency Demand & Waiting Pressure

Monthly trends in patient arrivals and average waiting times

Back Zoom-out

Lin ?

Peak demand occurred in February with 1,128 visits, placing additional pressure on emergency care capacity.

Hospitals Requiring Immediate Attention

3 Critical

1 Watchlist

6 Stable

Highest Wait Hospital

Nuffield Health Woking Hospital

108 min

Highest Mortality Hospital

Sandwell General Hospital

4.02%

Lowest Satisfaction Hospital

Royal Cornwall Hospital

61.85

Recommended Action

Prioritize staffing support at Nuffield Health Woking and Sandwell General. Current wait times exceed system average by 70%+, creating elevated patient flow risk.

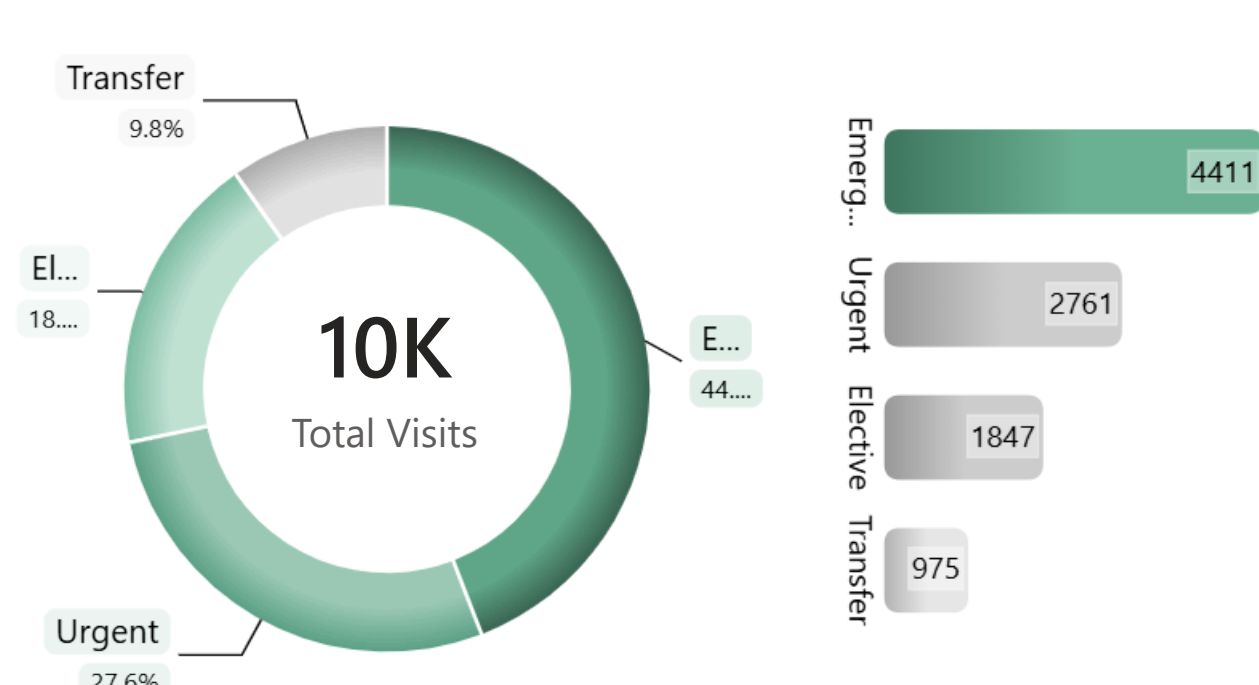

Hospital Pressure & Performance Monitor

Hospitals ranked by operational pressure and clinical outcomes

Hospital_Name	Total Visits	Avg Wait Time	Avg LOS	Readmission	Bed Occ.	Efficiency	Satisfaction	Risk Label
Sandwell General Hospital	896	103 min	55.7	22%	56%	0.55	62%	Critical
Nuffield Health Woking Hospital	880	108 min	53.7	5%	56%	0.88	62%	Critical
King's College Hospital NHS FT	875	29 min	25.7	14%	55%	0.68	63%	Stable
Norfolk & Norwich University Hospital	916	29 min	24.9	19%	54%	0.65	63%	Stable
Bristol Royal Infirmary	924	30 min	24.6	13%	48%	0.72	62%	Stable
Spire Manchester Hospital	890	48 min	31.0	6%	51%	0.94	62%	Stable
Royal Cornwall Hospital	936	49 min	31.4	16%	50%	0.72	62%	Stable
Harrogate District Hospital	902	62 min	62.7	14%	57%	0.76	63%	Stable
Alder Hey Children's Hospital	928	63 min	64.6	7%	55%	0.82	63%	Watchlist
Leeds General Infirmary	910	77 min	41.5	12%	59%	0.70	62%	Critical

Positive margin despite rising operational costs

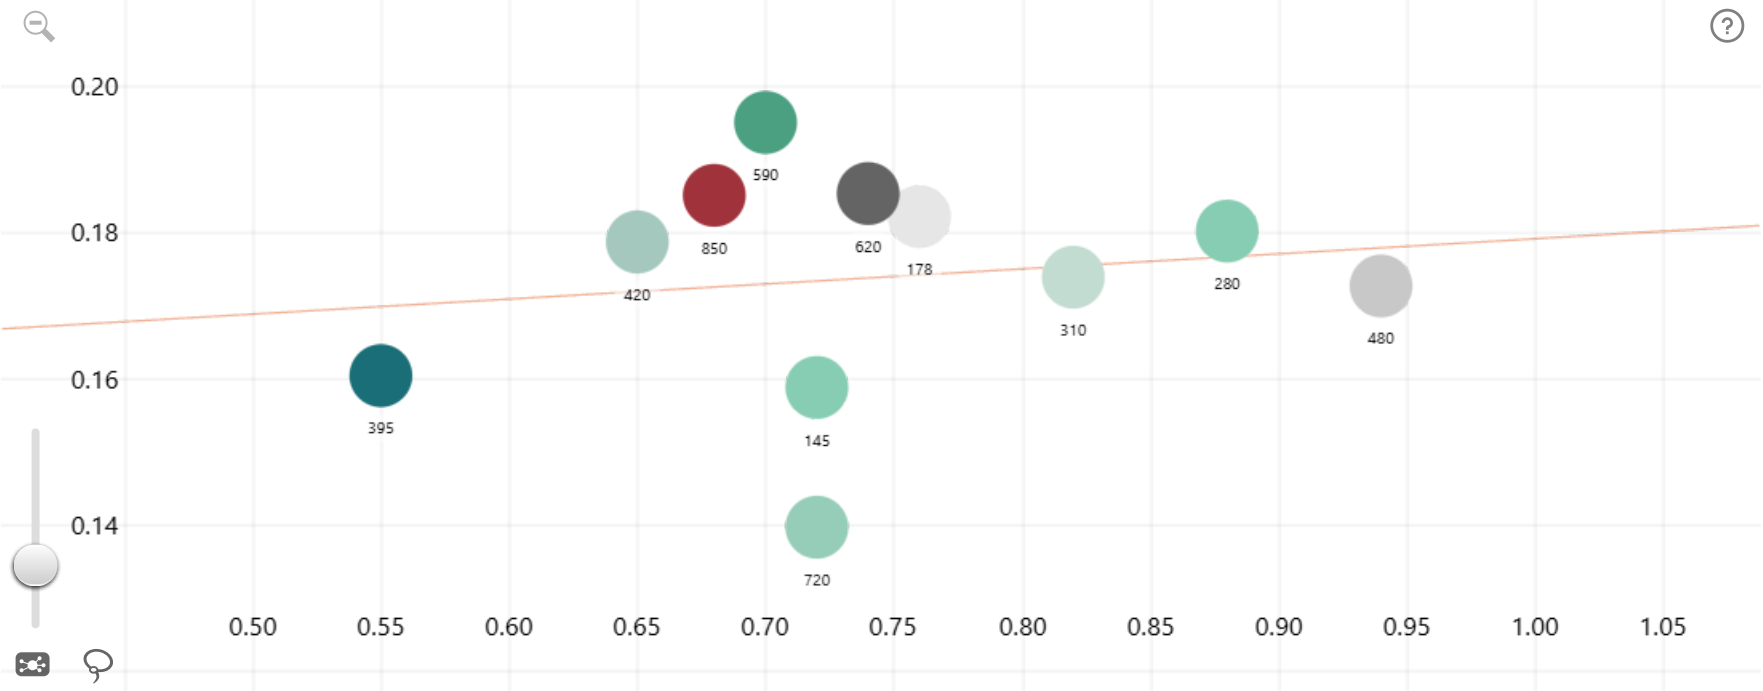

Efficiency Score

0.74

16% below optimal operational capacity

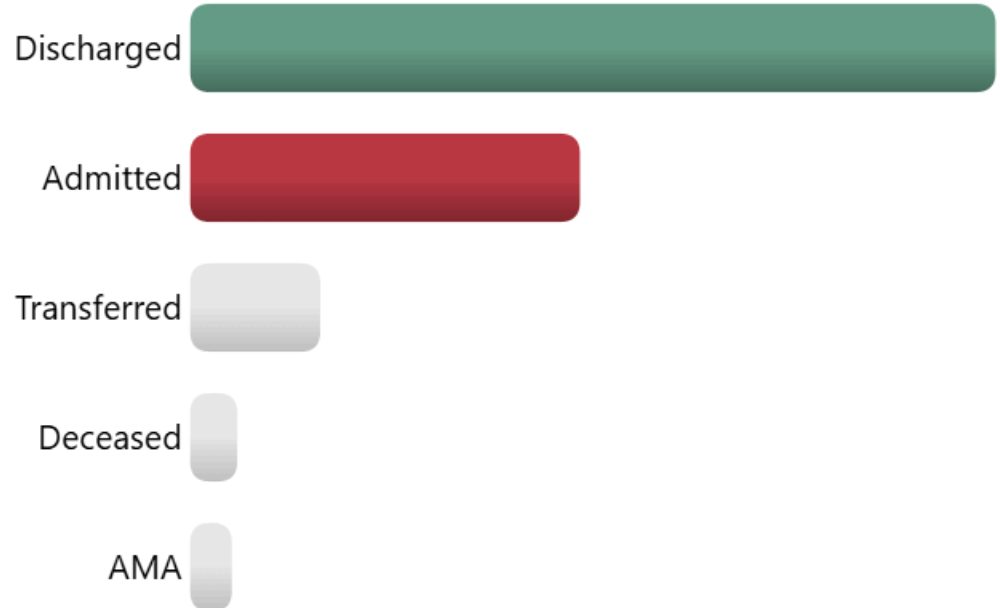

Operational Efficiency vs Financial Performance

Comparing hospital efficiency, profitability and capacity

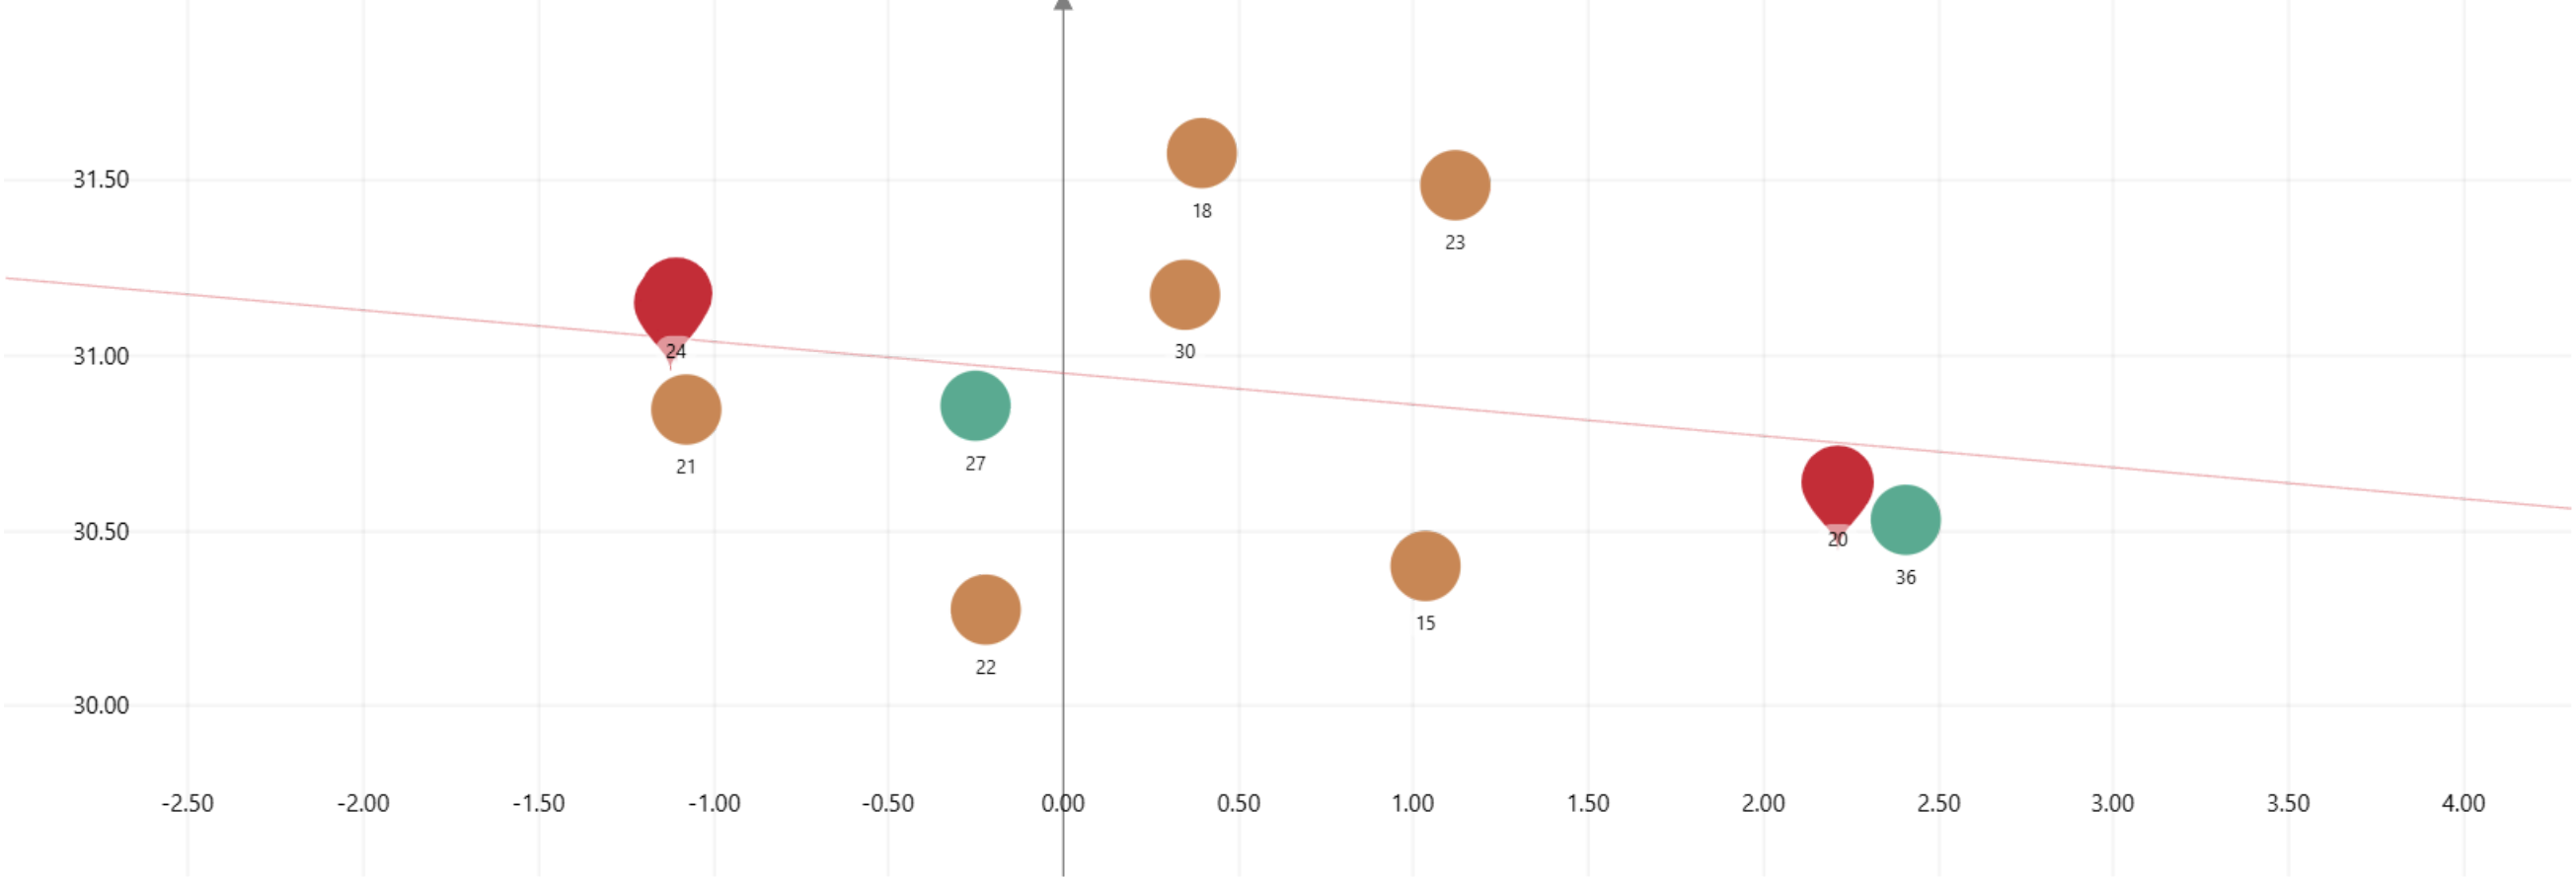

Patient Outcome Distribution

Discharge, admission and mortality outcomes across all visits

Operational Efficiency vs Patient Experience

Hospitals with longer wait times generally report lower patient satisfaction

Key Findings :

- High efficiency hospitals consistently achieve stronger financial performance while maintaining lower operational risk.
- Hospitals with elevated burnout levels show longer treatment delays and reduced workforce productivity.
- Readmission rates remain above desired benchmarks, suggesting a need for targeted post discharge interventions.
- Significant variation in hospital performance indicates opportunities to replicate best practices from leading facilities.

Efficiency score by hospital · ranked

Private hospitals (Spire, Nuffield) lead on efficiency - 1.8x staff ratio vs NHS trusts

Hospital	Efficiency	Profit Margin	Status
Alder Hey Children's Hospital	0.82	17%	Strong
Bristol Royal Infirmary	0.72	14%	Critical
Harrogate District Hospital	0.76	18%	Strong
King's College Hospital NHS FT	0.68	19%	Watchlist
Leeds General Infirmary	0.70	20%	Watchlist
Norfolk & Norwich University Hospital	0.65	18%	Watchlist
Nuffield Health Woking Hospital	0.88	18%	Best
Royal Cornwall Hospital	0.72	16%	Watchlist
Sandwell General Hospital	0.55	16%	Critical
Spire Manchester Hospital	0.94	17%	Strong
University College London Hospitals	0.74	19%	Watchlist

Priority Actions

Reduce Staff Burnout
Improve workforce resilience and efficiency

Prevent Readmissions
Strengthen post-discharge follow up

Expand Best Practices
Adopt strategies from top performing hospitals.
